

CONSTRUCTION & MINING

Version 1.00

TCA-7

TCB BREAKERS

- Light weight and easy to handle.
- Automatic throttle.
- Few parts; easy maintenance.
- Forged parts: durable.

- Simple structure, less maintenance, compact, light weight.

TRENCHER & CLAY DIGGER

- All major component parts are forged to increase durability.
- TCD-30 and TRC-30 are interchangeable with TPB-30 by simply changing the handle.
- Latch retainer for quick chisel change.
- Optional muffler available on request.

TPB BREAKERS

- Alloy steel forgings: provide maximum durability.
- Four bolt back head design: stands up in rugged use.
- Quick change latch type forged retainer: simple change of chisel.
- Hex shank: possible to use asphalt cutters and spades.

AA SERIES

- Precision valve allows excellent control during air consumption. Operation and low.
- Durable quick change spring retainer.
- Replaceable bushing.
- 2 types of bushings: hex and round.

SINKER ROCK DRILLS

- Forged steel components: durable.
- Multiposition throttle for smooth start up in drilling.
- Good balance: efficient operation.
- Each component has been carefully heat treated to maximize durability.
- Special anti-vibration handle for each model is optional.

LEG DRILLS

- The TJ leg drill series can be used for a wide variety of applications.
- Perfect leg / drill balance makes handling and operation simple and efficient. Reaction to the drill is minimal, reducing fatigue to the operator.
- The TJ leg drills are used in quarries, coal mines and for underground tunnel drilling.
- All parts are machined with precision, and heat treatment is performed with much care assuring the durability of these parts.

ROTARY HAMMERS

- The Toku rotary-hammers are designed for a wide variety of construction and maintenance applications such as driving or setting masonry anchors and drilling holes in concrete or rock.
- The TH-5 series is designed with an anti-vibration handle to absorb the reaction which develops during a drilling operation.
- Several models are available to suit your job and preference.
- Available taper rod: 15T and 19T.
- Available insert bit.

- INSERT BIT
- 15T TAPER ROD
- 19T TAPER ROD
- SOCKET ADAPTOR

Operation and Maintenance Instructions for Air Tools

Air tools are greatly affected concerning durability, performance and efficiency in the way of operation and maintenance. The following instructions should carefully be obeyed in order to maintain the performance of the new tool.

Air Compressor

An air tool is usually designed to be operated at an air pressure of 5-7kg/cm² on the pressure gauge. During operation, the air consumption is shown in the specifications for each tool. Thus the air distribution volume of an air-compressor should be larger than the total air-consumption of the tools under simultaneous use.

Preferably, the air distribution volume should be 20% more than the total air consumption.

This is due to the loss of air and decrease in the air pressure through piping. In general, the compressor to be installed to distribute 1m³/min should have a 10 HP engine.

The lack of air volume will result in a decrease of performance for an Air Tool. The air compressor, therefore, should have some allowance in capacity.

Lubrication

Lubrication is very important for air tool operation. All air tools which are sold by Toku are tested before delivery. However, if an inoperable situation or poor performance is experienced, please be sure to clean off the anti-corrosive oil by washing oil or putting a small volume of the lubricant (shown below), in the tool. Restart at slow speed gradually.

Recommended lubricants and instruction for lubrication is mentioned below.

Type of Tools	Places to be lubricated	Recommended oil	Method of lubrication	Volume of lubricant and Frequency to lubricate	Oil inlet
Concrete Breaker and other hammers	moving surface of valve and piston	Rock-drill oil below 15°C: No.32 15° — 25°C: No.100 above 25°C: No.150	Line oiler or by hand	3cc more than twice a day (by hand)	oil plug or air inlet
Rock-Drill and Hand hammer			Line oiler LO-150 should be used up in abt 1-1/4hrs.	2cc/min	

Dust-Proof and Anti-Corrosion

Even a little dust or moisture will affect an air tool to stop operation in some cases.

Thus, an air-filter (Drain separator) and lubricator should always be equipped in the piping and also the oil in the lubricator should be checked.

Maintenance and Periodical Inspection

Air tool parts are precision machined items. Throwing, dropping or rough handling is strictly prohibited.

Periodical inspection will increase the durability, performance and efficiency of the air tool.

Check air line frequently making sure clean air is being sent to the tool.
